

❖ HANDS-ON 5

❖ Reactive Forms — FormBuilder, FormGroup, FormArray & Custom Validators

Task 1: Build a Reactive Form with FormBuilder

Goal: Define and bind a reactive form using FormBuilder.

```
(base) riyabachheti@Riyas-MacBook-Air student-course-portal % ng generate component pages/reactive-enrollment-form
CREATE src/app/pages/reactive-enrollment-form/reactive-enrollment-form.css (0 bytes)
CREATE src/app/pages/reactive-enrollment-form/reactive-enrollment-form.spec.ts (645 bytes)
CREATE src/app/pages/reactive-enrollment-form/reactive-enrollment-form.ts (256 bytes)
CREATE src/app/pages/reactive-enrollment-form/reactive-enrollment-form.html (39 bytes)
(base) riyabachheti@Riyas-MacBook-Air student-course-portal %
```

Task 2: Custom Validators and FormArray for Dynamic Controls

Goal: Write a custom synchronous validator and use FormArray for repeating controls.
