

❖ HANDS-ON 10

❖ Unit Testing Angular Applications — Jasmine, Karma & TestBed

Task 1: Testing a Component — CourseCardComponent

Goal: Write unit tests for CourseCardComponent covering rendering, inputs, and output events.

```
Test Files 25 passed (25)
Tests      29 passed (29)
Start at   02:07:23
Duration   563ms (transform 167ms, setup 682ms, import 386ms, tests 280ms, environment 5.42s)
```

The screenshot shows the VS Code interface with the Explorer, Search, and Source Explorer panels on the left. The Explorer panel shows the project structure, including the 'src' directory and the 'app' directory. The Search panel shows the search results for 'student-profile.spec.ts'. The Source Explorer panel shows the source code of the 'student-profile.spec.ts' file. The code includes imports for 'ComponentFixture', 'TestBed', 'StudentProfile', 'provideStore', 'courseReducer', and 'enrollmentReducer'. It also shows the 'describe' and 'it' blocks for testing the component.

```
1 import { ComponentFixture, TestBed } from '@angular/core/testing';
2
3 import { StudentProfile } from './student-profile';
4 import { provideStore } from '@ngrx/store';
5 import { courseReducer } from '../store/course/course.reducer';
6 import { enrollmentReducer } from '../store/enrollment/enrollment.reducer';
7
8 await TestBed.configureTestingModule({
9   imports: [StudentProfile],
10  providers: [
11    provideStore({
12      course: courseReducer,
13      enrollment: enrollmentReducer
14    })
15  ]
16 }).compileComponents();
17 describe('StudentProfile', () => {
18   let component: StudentProfile;
19   let fixture: ComponentFixture<StudentProfile>;
```

Task 2: Testing a Service and an NgRx-Connected Component

Goal: Test CourseService with HttpClientTestingModule and test an NgRx store-connected component.

```
Test Files 25 passed (25)
Tests      30 passed (30)
Start at   02:15:32
Duration   689ms (transform 227ms, setup 699ms, import 383ms, tests 250ms, environment 8.52s)
```
